

Leverage Student Talent from 220+ schools!

Riiipen's online marketplace connects industry to emerging talent through micro-experiences such as:

In-Class Projects

Make your business challenge or opportunity the focus of a classroom. Do you want to redesign your website? Research the competitive landscape? Get a review of your HR manual?

Virtual Internships

Hands on support from students through a remote internship. These internships can be paid or for academic credit. They typically take shape around a specific project but are more hands-on and execution based than in-class projects.

Examples of Opportunities

In-Class Project: Electrical & Computer Engineer Capstone → 4th year level students from University of Saskatchewan work in teams to solve an open-ended design question such as a car anti-theft system.

Virtual Internship: Tech Skills Initiative → Certificate level students from Bow Valley College can contribute 300 hours through credit-based placement in areas like database management, business intelligence and predictive analysis.
